OUR BUSINESS

Bring Nature Indoors is the sister company of Green Oasis LLC. Family owned and operated since 2008, we have grown from commercial plant services to collaborating with clients all over the country on custom biophilic installations.

Our deepest belief is

that people and nature belong together, and making our indoor world a better place with plants is an important step to overall human wellness.

We work with our clients every step of the way. From understanding your project scope, providing digital renderings of the final product, to offering technical insights on our products.

The world is changing and the spaces where we live and work are being entirely reimagined. Let us help you design the beautiful, effective space you want to create.

MATERIALS

Our preserved Moss Walls are created from all natural forest moss that require no watering, sunlight, or maintenance of any kind. This is a groundbreaking way to create a high quality indoor experience with the added benefits of sound absorption and a major visual statement.

In addition to moss varieties, we have a selection of preserved plants that can be incorporated into any design.

PRESERVED
MOSS

WALLS

MOSS

We use preserved moss harvested sustainably from forests around the world. Once harvested, it is put through an industry-guarded process that allows it to retain its soft flexible organic texture while expanding its life span to up to ten years.

We have also provided the sound absorption ratings, based on the Noise Reduction Coefficient (NRC) scale, of each moss type. A score of 0 means that no sound is absorbed by a product and a score of 1 means that all sound is absorbed.

OUR PROCESS

PROJECT SCOPE

We undergo a consultation process to learn more about your project and determine which solutions would suit the brief.

DESIGN

After a consultation, you have the option to request an in-house rendering of what the final product could look like. This is a great tool to present to clients, stakeholders, and your team.

BUILD

Once everything is finalized, we get to work bringing your project to life in our in-house workshop. We provide progress updates and photos to ensure we are on track.

DELIVER

We ship our products anywhere in the U.S.. Wherever the project is located, we will ship your completed product and even handle installation if needed.

REINDEER MOSS

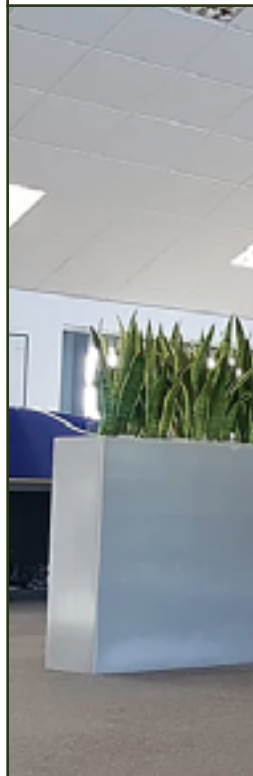

Reindeer Moss comes in 18 colors and is perfect for creating intricate designs, logos, and more.

This moss is a lichen found in abundance in the Arctic lands. It is an intricate, multi-stemmed plant that creates a beautiful texture, even in geometrical designs. It is the go-to choice for design-specific projects.

See all 18 colors on our website.

Reindeer Moss possesses an NRC of 0.55

MOSS TYPES

Flat Moss is a plush, flat moss that makes for a clean, simple look that works well as a signage backdrop or paired with other moss types for a forest look. It is also the most resilient moss that holds up well to foot traffic.

It grows in forests on fallen trees and is harvested without stripping the bark.

Flat Moss possesses an NRC of 0.65

POLE MOSS

Pole Moss (or 'bunn' moss) is a dimensional moss that is perfect for creating movement and a 3D effect in a design.

Like Flat Moss, it also grows in forests and is harvested with great consideration of its natural environment.

Pole Moss possesses an NRC of 0.90

MOSS TYPES

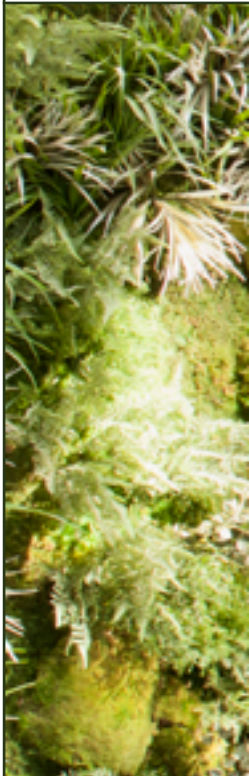

Pillow Moss is a textured moss that creates the appearance of plants growing right from the walls. This moss has the most variances in appearance.

BLENDED MOSS

Blended Moss designs are composed of a combination of two or more moss types to create a garden effect right on the wall.

Preserved plants and moss blended together creates one of the biggest wow effects of any preserved plant products.

HEXAGON TILES

These stock acoustic tiles make it simple to add a biophilic element with a high NRC rating. Installation is simple with our adhesive hook and loop system. Available in all Reindeer Moss colors (pg. 4).

Reindeer Moss possesses an NRC of 0.55

SIGNAGE + LOGOS

Logo's + Moss make a great combination. Our signage capabilities are full service from back lit LED, acrylic lettering and a range of custom fabrications.

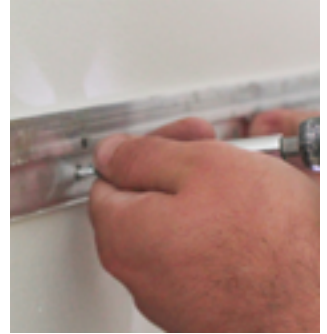

INSTALLATION

While different projects have different requirements, we always ensure the product is securely mounted. The installation method is dependent on where the product is mounted.

Typically, our framed moss logos are fitted with two Z-Clips for optimal support and easy installation.

Our moss walls that are mounted on felt substrate are typically screwed directly into the wall through the felt.

SUBSTRATE OPTIONS

FELT BOARD

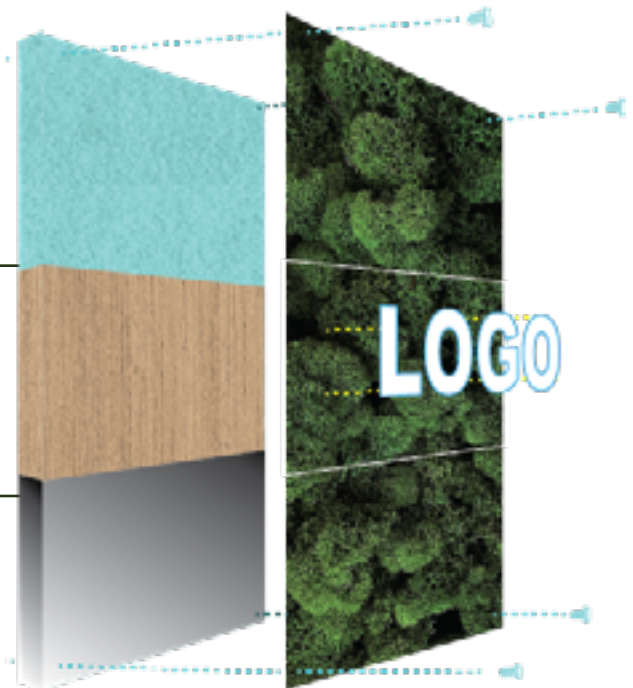

This is our most popular substrate. It supports the moss while keeping the weight of the overall installation lighter and increases the acoustic properties. It can be modified easily on installation and flex to follow curved walls, ensuring a quality fit in any space.

WOOD

A wooden substrate is a great option for rigidity as well a framework for mounting signage on moss.

ALUMINIUM

While not the most commonly used substrate, an aluminium backing is an option for rigidity and fire resistant building code requirements.
